Customer Journey Map

UNESCO World Heritage Sites Dashboard — Analyst / Visitor Journey

SCENARIO: Exploring the UNESCO Heritage Dashboard	Entice How does someone first become aware of the dashboard?		Enter What happens as they begin exploring?		Engage What happens during the core exploration?				Exit What happens as they finish exploring?		Extend What happens after the session is over?	
Steps What does the user typically experience?	Hears about the dashboard (course, LinkedIn, colleague)	Opens the shared Tableau Public / web link	Landing page loads (Flask web app)	Overview dashboard renders	Explores Category & Region charts	Explores Map & Country treemap	Checks Danger Analysis dashboard	Views the Story walkthrough	Notes key insights (risk sites, trends)	Closes the tab / ends session	Shares the dashboard link with others	Returns later for updated data
Interactions What touchpoints/objects do they use at each step?	LinkedIn post, README, or verbal recommendation	Browser, shared URL	Flask-hosted HTML page, navbar	Embedded Tableau viz (iframe/object)	Bar chart, pie chart tooltips	World map, treemap hover tooltips	Danger pie chart, top-10 list, trend lines	Tableau Story tabs, navigation arrows	Mental notes, screenshots, notes app	Browser tab, no explicit logout needed	Email, chat, social media share of the link	Same URL, refreshed Tableau Public data
Goals & Motivations What is the user's primary goal at this step?	Help me discover useful heritage data tools	Help me get to the content quickly and safely	Help me see the page is loading correctly	Help me understand what this dashboard covers	Help me see the big-picture distribution of sites	Help me see where sites are concentrated	Help me spot which sites need urgent attention	Help me follow a guided narrative easily	Help me remember what I learned	Help me leave feeling the visit was worthwhile	Help me pass this along to people who'd find it useful	Help me see what's changed since my last visit
Positive moments What feels enjoyable or delightful?	Curiosity is sparked by an appealing preview image		Page loads fast, clean design feels professional		Clear, colorful charts are easy to read	Interactive map/treemap feels satisfying to explore	Danger pie instantly shows the scale of the problem	Story format makes the data feel like a narrative			Easy one-click share via URL	
Negative moments What feels frustrating or confusing?		Link might be broken or slow to load		Embedded viz can take a few seconds to appear	Long region names overlap on pie chart labels	Small countries hard to see on the world map			No way to bookmark/save specific insights			No notification when data is actually updated
Areas of opportunity How might we improve this step?	Add a short teaser GIF or screenshot when sharing	Add a loading indicator so users know it's working		Add a brief 1-line summary of what dashboard shows	Shrink/legend-ize long region labels	Filter map labels to top N for clarity		Add narrated captions to each story point	Add a 'key takeaways' summary panel		Add social share buttons directly on the page	Add a 'last updated' date stamp on the dashboard
