| Project Name | Heritage Treasures: An In-Depth Analysis of UNESCO World Heritage Sites in Tableau |
| Maximum Marks | 4 Marks |

## Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

The diagram below shows how UNESCO heritage data flows from the raw source through cleaning, visualization, publishing, and finally to the end users via the Tableau dashboard and Flask web app

## User Stories

Use the below template to list all the user stories for the product.

| User Type | Functional Requirement (Epic) | User Story Number | User Story / Task | Acceptance criteria | Priority | Release |
|---|---|---|---|---|---|---|
| Dashboard User (Analyst) | Data Access | USN-1 | As an analyst, I can view an overview dashboard showing site counts by category and region. | I can see bar, pie and map charts loading with correct totals | High | Sprint-1 |
| Dashboard User (Analyst) | Data Access | USN-2 | As an analyst, I can see the top 10 regions/sites by area on a world map. | Map highlights correct top 10 countries/regions with tooltips | High | Sprint-1 |
| Dashboard User (Analyst) | Trend Analysis | USN-3 | As an analyst, I can view a year-wise forecast of heritage site inscriptions. | Line chart shows Actual vs Estimate split by year | Medium | Sprint-1 |
| Dashboard User (Analyst) | Trend Analysis | USN-4 | As an analyst, I can view regional inscription trends over time, split by region. | Line chart shows separate colored lines per region | Medium | Sprint-2 |
| Dashboard User (Analyst) | Risk Analysis | USN-5 | As an analyst, I can view the proportion of sites currently in danger vs not in danger. | Pie chart shows correct in-danger/not-in-danger counts | High | Sprint-2 |
| Dashboard User (Analyst) | Risk Analysis | USN-6 | As an analyst, I can view the top 10 sites most prone to danger/extinction. | List/bar shows top 10 ranked sites with area or risk metric | High | Sprint-2 |
| Dashboard User (Analyst) | Comparative View | USN-7 | As an analyst, I can see the number of heritage sites grouped by country in a size-proportional view. | Treemap blocks are sized correctly by site count per country | Medium | Sprint-2 |
| Dashboard User (Analyst) | Comparative View | USN-8 | As an analyst, I can see the number of countries per region in a bubble view. | Bubble size reflects correct country count per region | Low | Sprint-1 |
| Web Visitor | Web Access | USN-9 | As a visitor, I can open the project website and view all dashboards without installing Tableau. | Dashboards load and render inside the Flask web page | High | Sprint-3 |

| User Type | Functional Requirement (Epic) | User Story Number | User Story / Task | Acceptance criteria | Priority | Release |
|---|---|---|---|---|---|---|
| Web Visitor | Web Access | USN-10 | As a visitor, I can toggle between light and dark mode while viewing the dashboards. | Clicking the toggle switches the page theme instantly | Low | Sprint-3 |
| Web Visitor | Navigation | USN-11 | As a visitor, I can navigate between the Overview, Danger Analysis, and Story sections easily. | Navbar links scroll smoothly to the correct section | Medium | Sprint-3 |
| Administrator | Data Maintenance | USN-12 | As an administrator, I can refresh the underlying dataset and republish updated dashboards. | Updated data reflects correctly after republishing to Tableau Public | Medium | Sprint-3 |
